

Claims

1. Device for providing a drink from extracts, in particular tea extracts, comprising:
 - at least one container for an extractable mixture which is at least partially
5. permeable to drink and which container comprises at least two container parts pivotally connected to each other,
 - a cover connected to the container, which cover comprises at least two cover parts pivotally connected to each other, wherein each cover part is pivotally connected to a separate container part,
10. characterized in that the container is connected to the cover such that the device is pivotable between a folded-out active position, in which a substantial part of the container lies at a distance from the cover, and a folded-up non-active position, in which the container is at least substantially enclosed by the cover.
15. 2. Device as claimed in claim 1, characterized in that each cover part is connected, at least close to a side remote from the adjacent cover part, to a part of the container part at least close to a side remote from an adjacent container part.
20. 3. Device as claimed in either of the foregoing claims, characterized in that the container is manufactured from a flexible material.
4. 4. Device as claimed in any of the foregoing claims, characterized in that each container part is provided with at least one compartment for the mixture.
25. 5. Device as claimed in any of the foregoing claims, characterized in that at least one cover part is provided with an incision extending to a side of the cover part for the purpose of positioning the device.
30. 6. Device as claimed in claim 5, characterized in that the incision is given an at least partial hook-like form.
7. 7. Device as claimed in any of the foregoing claims, characterized in that the container is at least substantially non-permeable to the mixture.

8. Device as claimed in any of the foregoing claims, characterized in that the cover and the container are connected releasably to each other.
- 5 9. Device as claimed in claim 8, characterized in that the container is provided with coupling means for co-action with counter-coupling means forming part of the cover.
10. Device as claimed in any of the foregoing claims, characterized in that the container is provided with a closable filling opening for feed respectively discharge of the mixture.
11. Cover for use in a device as claimed in either of the claims 8 and 9.
12. Container for an extractable mixture for use in a device as claimed in either of the claims 8 and 9.
